## Module Information:

**Name:** RBI Color Picker Helper Panel v1

**Author:** Hope Roth

**Summary:** This module uses an embedded cross-point to control a zone of color-changing fixtures from a popup using the color picker smart object.

## Inputs/Outputs/Parameters:

### Inputs:

| | |
|---|---|
| zone_equipment_id | Select the equipment ID of a zone. |
| color_picker_close | Pulse to indicate that the color picker popup has been closed. This will disconnect the cross-point. |
| [panel_white_lvl] | The current intensity value of the selected zone that has been input by the panel. |
| panel_red_lvl | The current red value of the selected zone that has been input by the panel. |
| panel_green_lvl | The current green value of the selected zone that has been input by the panel. |
| panel_blue_lvl | The current blue value of the selected zone that has been input by the panel. |
| panel_select_recent[xx] | Pulse to select a recently selected RGB value. This is meant to be used with a color chip smart object. This can be used to sync up colors between different zones. |

### Outputs:

| | |
|---|---|
| [new_zone_selected] | This pulses if a new zone has been selected. |
| panel_zone_name$ | This string represents the name of the currently selected zone. |
| [panel_white_lvl] | This will update the current zone's intensity level when a new value has been input by the panel. |
| panel_red_lvl | This will update the current zone's red level when a new value has been input by the panel. |
| panel_green_lvl | This will update the current zone's green level when a new value has been input by the panel. |
| panel_blue_lvl | This will update the current zone's blue level when a new value has been input by the panel. |
| pannel_recent[xx]_red_lvl | When panel_select_recent[xx] is pressed, this will output a recently selected green value. |
| pannel_recent[xx]_green_lvl | When panel_select_recent[xx] is pressed, this will output a recently selected blue value. |

| | |
|---|---|
| pannel_recent[xx]_blue_lvl | When panel_select_recent[xx] is pressed, this will output a recently selected red value. |

## Parameters:

| | |
|---|---|
| control_id | The control ID to be used by the embedded cross-point. |
